

NYRP TREE GIVEAWAYS: SUPPORTING BIRD LIFE

Birds are vital to NYC's ecosystem, providing pollination, seed dispersal, and pest control. Trees provide key resources, for birds including shelter and food.

By supporting NYC's bird life, you will build a sustainable environment for your community!

Many tree species in NYRP's Tree Giveaways support bird life, including the species you see here. Your neighborhood's birds will enjoy these trees when they need a meal or a spot for their next nest:

- Allegheny Serviceberry
- Black Cherry
- Elderberry
- Fragrant Sumac
- Hornbeam
- Northern Red Oak
- Persimmon
- Red Maple
- Sweetgum
- Sycamore
- Witchhazel
- And many more!
