

2025 IMPACT REPORT

Since 1995, we've worked to ensure access to clean, green open space for all New Yorkers.

Access to nature improves lives. For three decades, New York Restoration Project has lessened the disparity in park and garden access across New York City thanks to our community of supporters.

From planting **thousands of trees**, welcoming **hundreds of volunteers**, and building **new green spaces**, 2025 has been a landmark year in our mission to green our city.

OUR 2025 IMPACT

NYRP's work is as vital as ever.

More stories of NYRP 2025 impact include:

- Launching the **1,000 Chestnut Challenge**: a community science experiment to help return the functionally extinct American chestnut back to New York City.
- Diversifying our urban agriculture workshop series to include **food preservation, biochar application, and Afro-Indigenous agricultural techniques.**
- Assembling 72 raised beds at a single urban farm—**our largest raised bed installation to date!** [Photos here](#) →
